

# Increase Productivity with uni Chains

## INDUSTRY

Hygiene

## PRODUCT

uni Chain

## APPLICATION

Cooling Tunnel

### Challenge

A multinational consumer goods company, and a major player in the hygiene market, was experiencing expensive downtime. The estimated downtime affected 12 lines in their cooling tunnel application for the production of deodorant and antiperspirant (equating to \$5000 per hour per line).

The delivery from their former supplier did not meet their requirements. Faced with this costly issue, they contacted the OEM, who initially provided them with a sub-par alternative. However, the company later discovered that Ammeraal Beltech, a trusted local supplier of straight running and side flexing conveyor chain, had the solution they needed and could ship it quickly.

### Solution

The uni chain material which we mold in the US, enabled AB to deliver 5160 ft of LF820-K400 slat top chain quickly. This prompt delivery saved the customer from experiencing costly downtime in their cooling tunnels.

### Benefits & Advantages

- Local, US molding and assembly of our uni Chain product
- uni Chain LF820-K400 is a lightweight and strong product which fits this applications' needs
- Its advanced self-lubricating polymer flights provide customers smooth operation
- It is an industry standard in the dimensions, which means these chains are capable of interlacing with all competitor products
