

## 'Setting new standards'

Cabinplant A/S is of the opinion that/believe that a good solution should not necessarily put a stop to development. We wish to set new standards for blancher belts and we have good experience in doing this with Ammeraal Beltech Modular A/S.

We have completely clear and stringent product specifications to our suppliers. In our cooperation with Ammeraal Beltech Modular A/S, we also delivered a product specification to a new blancher belt which should be used for various products (all-in-one). From this specification, the uni BLB belt was developed. Among other things, consideration had to be taken to tensile strength, no product contact of steel and open eyes so the entire belt area is 'hit' by steam blanching or cooling.

There is no development without challenges but Ammeraal Beltech Modular A/S is a very good sparring partner not giving up when challenges arise. The company has an innovative approach to such a project and works determinedly for a good result.

With uni BLB we have set a fantastic standard and we would gladly take a round more in order to set yet another standard together with Ammeraal Beltech Modular A/S.
